Interflon Lube TF

Interflon Lube TF is the renowned dry-film lubricant fortified with MicPol® technology. It forms a highly durable lubrication film that virtually eliminates wear on moving parts. Holds up to high pressures, resists water wash-off, eliminates stick-slip and will not attract dirt, dust and other abrasives.

Goes on wet, cleanses, displaces moisture, breaks down deposits and penetrates even into the most inaccessible areas. Loosens seized, rusted and frozen parts and prevents dirt accumulation and the formation of rust and other corrosives.

- Excellent, long lasting protection against wear
- Inhibits rust and corrosion
- Strong resistance to water washout and contamination
- Excellent dry run characteristics
- Displaces moisture, also in electrical application

StageLIFT HOW TO LUBRICATE

CAUTION!

Before first operation and during the operation of the electric chain hoist the chain links must be lubricated over the whole length of the chain by penetration oil.

- Lubricate the chain in minimum 3 monthly intervals
- Before repeating lubrication clean the chain thoroughly
- Lubricate chain without load
- The amount and frequency of lubricant may vary due to operating conditions
- Use a dry-film lubricant if the operating conditions are conducive to wear (sand, emery)
- You can also lubricate the chain in a separate chain box if that is convenient for you
- Shorten lubrication intervals if necessary / in dependence of operating conditions
- Lubricate the red shaded areas of each chain link
